Bluffton Road Bridge Superstructure Replacement Project

This project involves the replacement of the top portion of the entire bridge over the St. Marys River, replacement of one pier cap, installation of riprap around the piers, and reconstruction of the adjacent roadway and sidewalks at each end of the bridge.

The City of Fort Wayne's Public Works Division and INDOT are contracting with Milestone Contractors, LP to replace the Bluffton Road Bridge superstructure in your area. The purpose of the project is to increase reliability of the transportation system and remove the load limit on the bridge. The majority of the construction will take place in public rights-of-way.

We know public works projects can be disruptive and inconvenient for neighborhoods. We want you to be well-informed about the project and know who can answer your questions or resolve any construction issues. Please join us to meet project representatives from Public Works and Milestone.
